

BUZZ-IN

Phase 1: Initiation

User Interaction Flow

The goal is to transform waste disposal into a "shared ritual" through a seamless digital interface.

Action

The user scans a static QR code printed on the station's durable antimicrobial surface.

System Trigger

The QR code opens the Campus "Buzz-In" Web-App on the user's smartphone (no download required for better accessibility).

Phase 2: AI Item Recognition

Action

Within the app, the user clicks "Scan Item." This launches the smartphone's camera.

Processing

An integrated Object Recognition API identifies the material (e.g., "PET Plastic Bottle" or "Architecture Trace Paper").

Guidance

The app screen shows the name of the correct bin to place the item in

{the bin types : metal, paper, glass, plastic, mixed, compost, cardboard, batteries , food, cigarettes,

Phase 3: reward

Verification

Once the item is dropped, an internal weight sensor or optical sensor within the bin confirms the disposal.

Reward: The system credits the user's account with "Buzz-Points."

Standard Items: 1 Point.

High-Impact Items (Batteries): 5 Points.

Notification: an animation on the station's digital screen confirm: "Point Gained!".

Phase 4: User Account & Exchange

Dashboard

The user logs in via university credentials to see their Total Points

Cafeteria Integration (The Voucher System)

Points can be converted into Digital Vouchers (QR codes).

Example: 25 Points = 1 Free Coffee

50 Points = 10% Discount on Lunch.
